15.10-16.00	Facilitating Access & Promotion/Marketing
16.00	Workshop ends

Target audience: school library staff

Course outline:

An introductory course designed to support school librarians who are beginning to set up e-book collections.

You will have the opportunity to explore different e-books including a range of commercially-published and free reference works, monographs, textbooks, and fiction. Examples will include individual titles and also collections of e-books, such as those offered by NetLibrary, Credo, MyiLibrary and Questia. JISC Collections for Schools will also be introduced.

The course will also help to clarify the new opportunities e-books offer for school libraries and their users, and will explore some of the significant collection management and promotional issues which challenge school librarians.

In practical exercises, delegates can explore examples of online e-books in a structured way and will examine the major collection management, and marketing and promotion issues, enabling them to compare their findings with current professional practice.

Trainers:

Chris Armstrong and Ray Lonsdale have been working in the field of e-book development for the past 11 years. They are members of the Joint Information Systems Committee e-Book Working Group, which has been promoting the publishing and uptake of e-books in higher and further education and sixth form colleges. Ray is Reader in Information Studies at the University of Wales, Aberystwyth and a former editor of The School Librarian. For the past 20 years, Chris has run a consultancy and training company, Information Automation Limited, specialising in the field of e-publishing and e-resources. Chris and Ray have been conducting training courses in the field of electronic information nationally and internationally for some years.
